User's Manual

1.0 General Information

This "Pharmaceutical Management system" was designed to aid the pharmaceuticals companies or the associated dealers to keep track of the drug and its details to achieve a more efficient and systematic way to storing information.

2.0 System Overview

The system consists of two major part; Data Entry and Stock Information section. The data Entry section is used to enter a new record or information about any specific drug with its proper details and Stock information section holds that stored data and displays in tabular format.

3.0 Getting Started

One can go to file menu and into the menu item "open" to get access to the previous records or simply click "exit" or "new" to exit the window or create a new file space to enter data.

Fill all the data fields with proper data and click "store" to store the data. Or simply, click "clear" button to clear text fields. And to delete data from table; select the row and press the button "Delete selected row"

There is feature to sort the stored data on the basis of Type or rate. Click the preferred sorting method and click "sort" to sort the data in the table.

Search function can be performed either by rate or type of drug which can be obtained by choosing desired search option and clicking "Search" button. And addition to that "Drug availability" button is to check drug availability in table on basis of type selected.
